

Together We will end MS.

For Terri and Caitlin, life will never be the same.

At just eight, Terri's daughter Caitlin was diagnosed with multiple sclerosis – a chronic, often disabling disease of the brain and spinal cord that has no cure.

Since 1948, we have worked together to raise awareness, fund research, and support programs that make a critical difference in the lives of people touched by MS.

Please join us in the fight to end MS.

Fundraise, volunteer or donate today.
