The Research Proposal should stand alone (i.e. it should contain all of the information required to support your research plan and should contain a self-contained, complete description of your project).

In the Research Proposal you should include:

- A description of the objective(s), central research questions/hypotheses and scientific aims of the project.
- The rationale for the project and its relevance to MS (review of previous work done in this area and data generated, referencing relevant scientific literature).
- Expected outcomes and impact (what knowledge will be obtained, will there be improvements to health and quality of life for people affected by MS, and will the work impact the field of MS).

#### **Impact and Relevance to MS**

- Describe your project using non-scientific, plain language. Provide clear key messages about your research and the outcomes of the project, ensuring that they are relevant to people affected by MS and address important unmet needs and challenges faced by the MS community.
- Indicate how the proposed research can improve the health and quality of life of people affected by MS, uncover important knowledge of the biological, clinical, psychosocial and societal impacts of MS, and how it will advance the field overall.
- This information will be reviewed by the lay reviewers on the review committee, referred to as community representatives. The summaries are also used by the MSSC to inform stakeholders – including people living with MS, staff, volunteers, and donors - about the valuable research supported through its funds. Failure to meet the criteria of a satisfactory lay and relevance summary as determined by the community representatives will result in the applicant resubmitting this section for approval.
- One (1) page maximum.

#### **Addressing Reviewers' Recommendations (REQUIRED for resubmissions only)**

- State how the reviewers' concerns (both scientific and lay), as outlined in the written critiques
